MOISTURE BARRIER BAGS

Having maximum resistance to vapor and oxygen, Moisture Barrier Bags are designed to protect the electronic products which are sensitive to moisture and electro static discharge (ESD) e.g. PCBs or integrated circuits. They are suitable for the packing of these articles during shipping and storage.

The opaque and light-tight material makes the moisture barrier bags suitable for vacuum-sealing.

FEATURES AND BENEFITS:

- Protects electronics from moisture and static damage
- Opaque and light tight to offer additional protection
- Firm lamination and heat sealing offers superior resistance to vapour and oxygen
- Surface resistance of 10^8 - 10^{11} Ohms
- These bags are ideal for transporting and storing sensitive devices such as circuit boards and electronic components.
- Available in 3.6 / 4.4 and 6Mil thicknesses
- Flexible structure & easy to vacuum seal
