Efficiency Test Improve your Weller FT) Spare Filter turnover

According to guidelines of the German professional associations, extraction system has to be checked at least annually for adequate function and Efficiency. (According to the German TRGS 528 BGETF)

Based upon the EfficiencyTest you can check the correct operation of the fume extraction units WFE 2S / WFE 4S and Zero Smog 4V / Zero Smog 6V.

Your sales force can provide the EfficiencyTest as a "free service" to customers. OurTeam will support you.

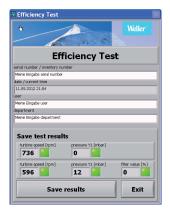

Use the Efficiency Test as a tool to get in contact with customers and inspect the equipment on site. On average at least once a year the main filter must be changed, since after this time the active carbon becomes saturate.

Defects in the system and used filters can be detected and renewed.
