ESD Safety

Esd L-shape bracket (3x Banana)

SKU: AE000001

Description

Earth bonding plugs (EBP) also known as grounding plugs are designed as a safe and easy way to create an effective ESD grounding point for ESD products and ESD test equipment within an ESD protected area (EPA). Under bench mounting Earth Bonding Point bracket with a 10mm stud and two banana sockets for 4mm jacks. Easy to fit Earth Bonding Point for the front of a workbench. With a 2 metre long fitted ground cord with an M5 eyelet, the eyelet is then attached to an ESD Bonding Plug. We recommend our ESD318 Earth Bonding Plug with 2 x 10mm studs plus M5 post. Fitted with a one 10mm stud and two banana sockets this bonding point gives various grounding cord connection options. Each connector point is fitted with a 1 M ohm safety resistor (three resistors for each bonding point).

To connect a person to the ESD workbench we make use of a bench mount grounding also called a Wrist strap parking station. Grounding point, L-shape, with 3 banana connections

Feature:

- Fits under the bench
- Connects operators and other elements of the EPA to ground
- Complete with 2m earth lead
- Moulded from ABS with rounded corners
