

## TECHNICAL DATASHEET

ESD Protection Solutions

SKU: 070-1012

### Earth Bonding Point

An Earth facility (EF) acts as the main connection point for either the electrical mains earth or a dedicated ESD earth within an Electrostatic Protected Area (EPA).

An Earth bonding point (EBP) can be utilized to ground bench matting, floor matting, and wrist straps, ensuring they all maintain the same electrical potential.

It's crucial to note that while multiple EBPs can exist in an EPA, there should only be one EF connection.

#### FEATURES & BENEFITS:

- Intended for attachment to a workbench
- Equipped with a single M5 post
- Yellow color for easy identification, featuring an ESD warning symbol
- Made from ABS material
- No resistor included
- Comes with a 2-meter long earth wire with an eyelet termination

PRODUCT CODE	DESCRIPTION	DIMENSION (mm)
070-1012	ESD Earth Bonding Point	40 X 45 X 12
